- 04 Collecting data on heart rhythm and arrhythmias, blockages and ischemic disorders (ECG)
- 05 Blood pressure and pulse measurement
- 06 Cholesterol analysis
- 07 Glucose level analysis

The kit

Case made of impact-resistant plastic

Tablet with the Health Check-Up software

ECG

Blood pressure monitor

Weighing scales

Pulse Oximeter

Warranty and technical support for software during the license validity period

Glucose meter + 25 lancets and test strips

Piercing device

Blood Analyzer (cholesterol) + 25 test strips

Spirometer

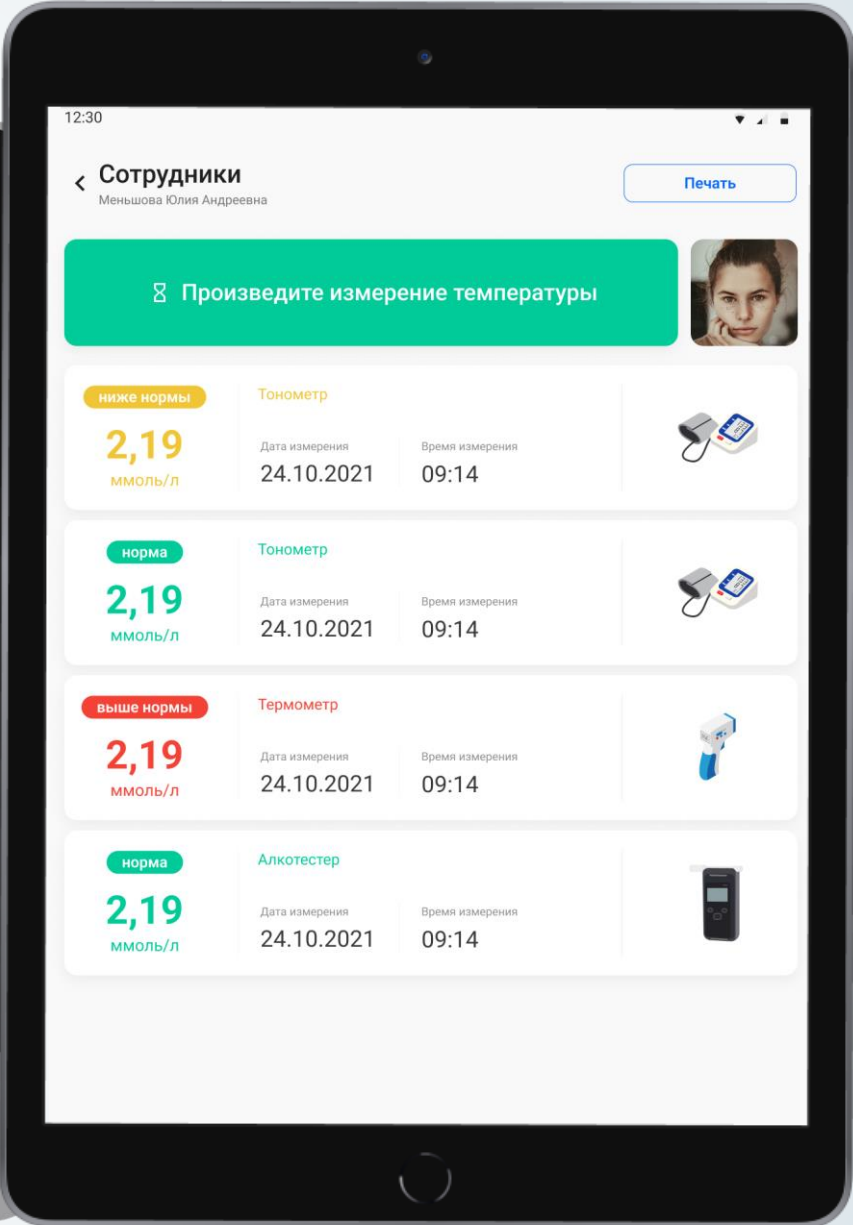

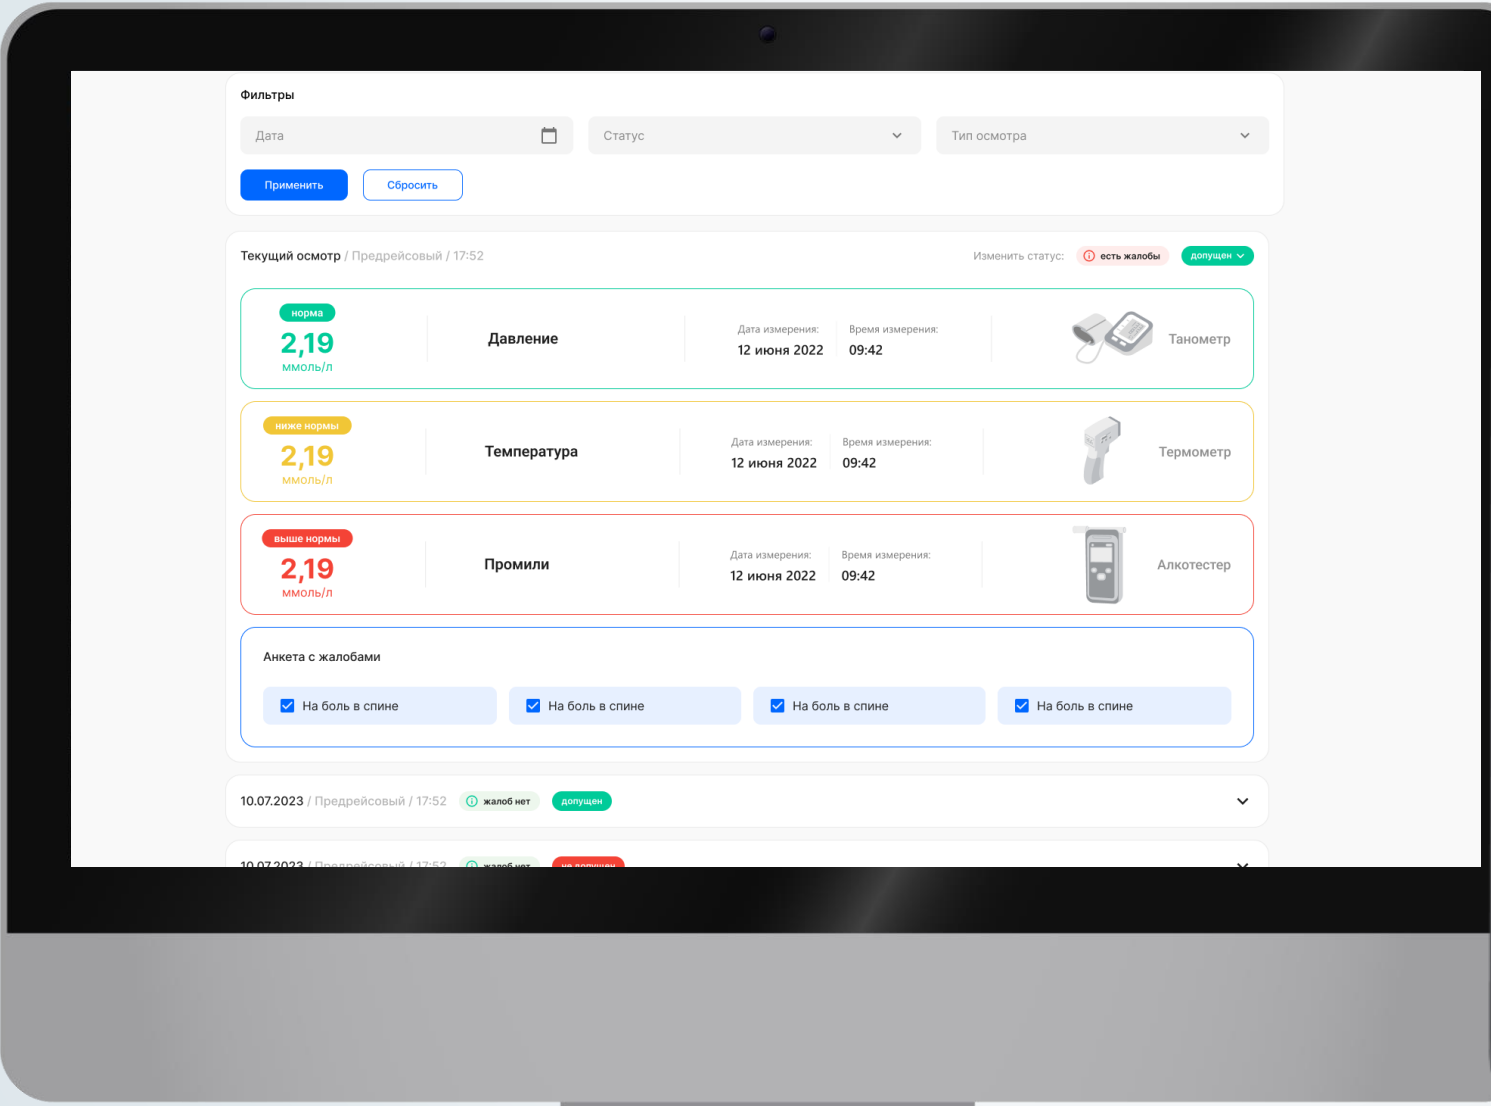

Sorteare for a doctor's workplace

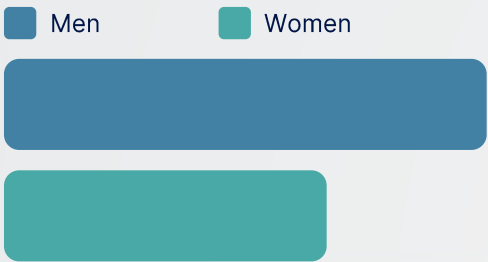

Simple interface

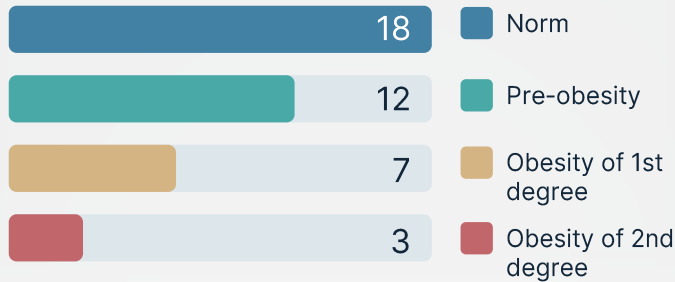

Generating reports

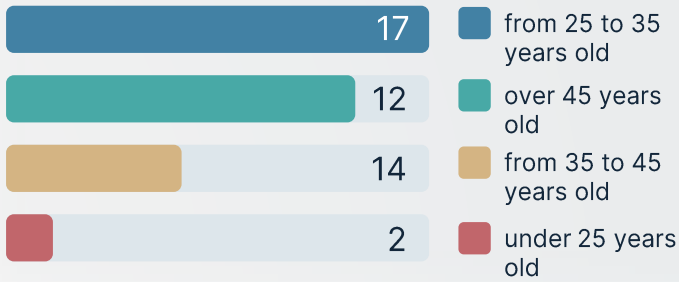

Distribution of patients by sex

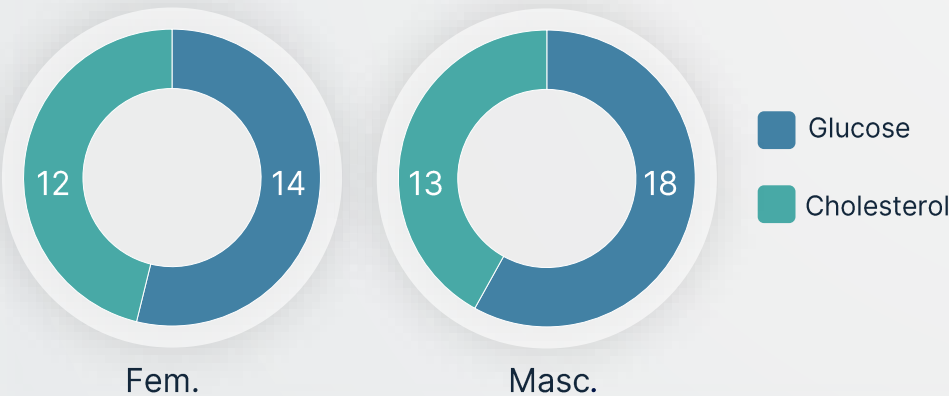

Distribution by body weight, ind.

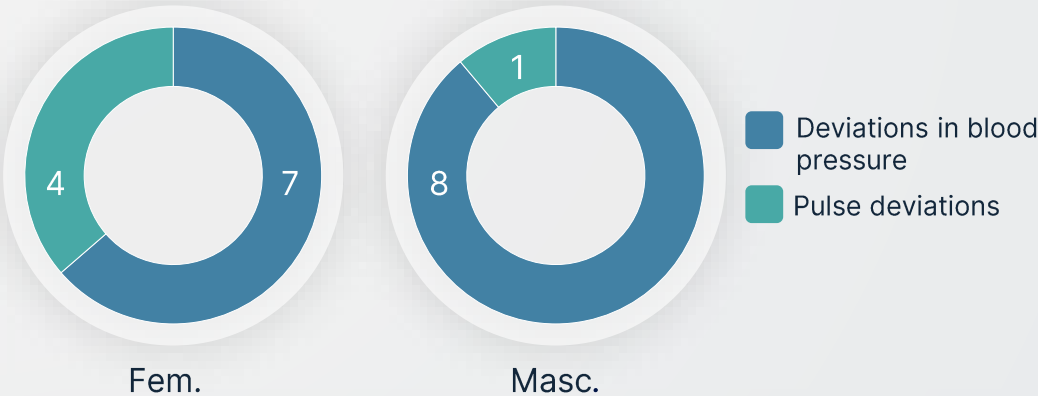

Distribution of patients by age

The number of people examined with deviations detected in the analyses by sex

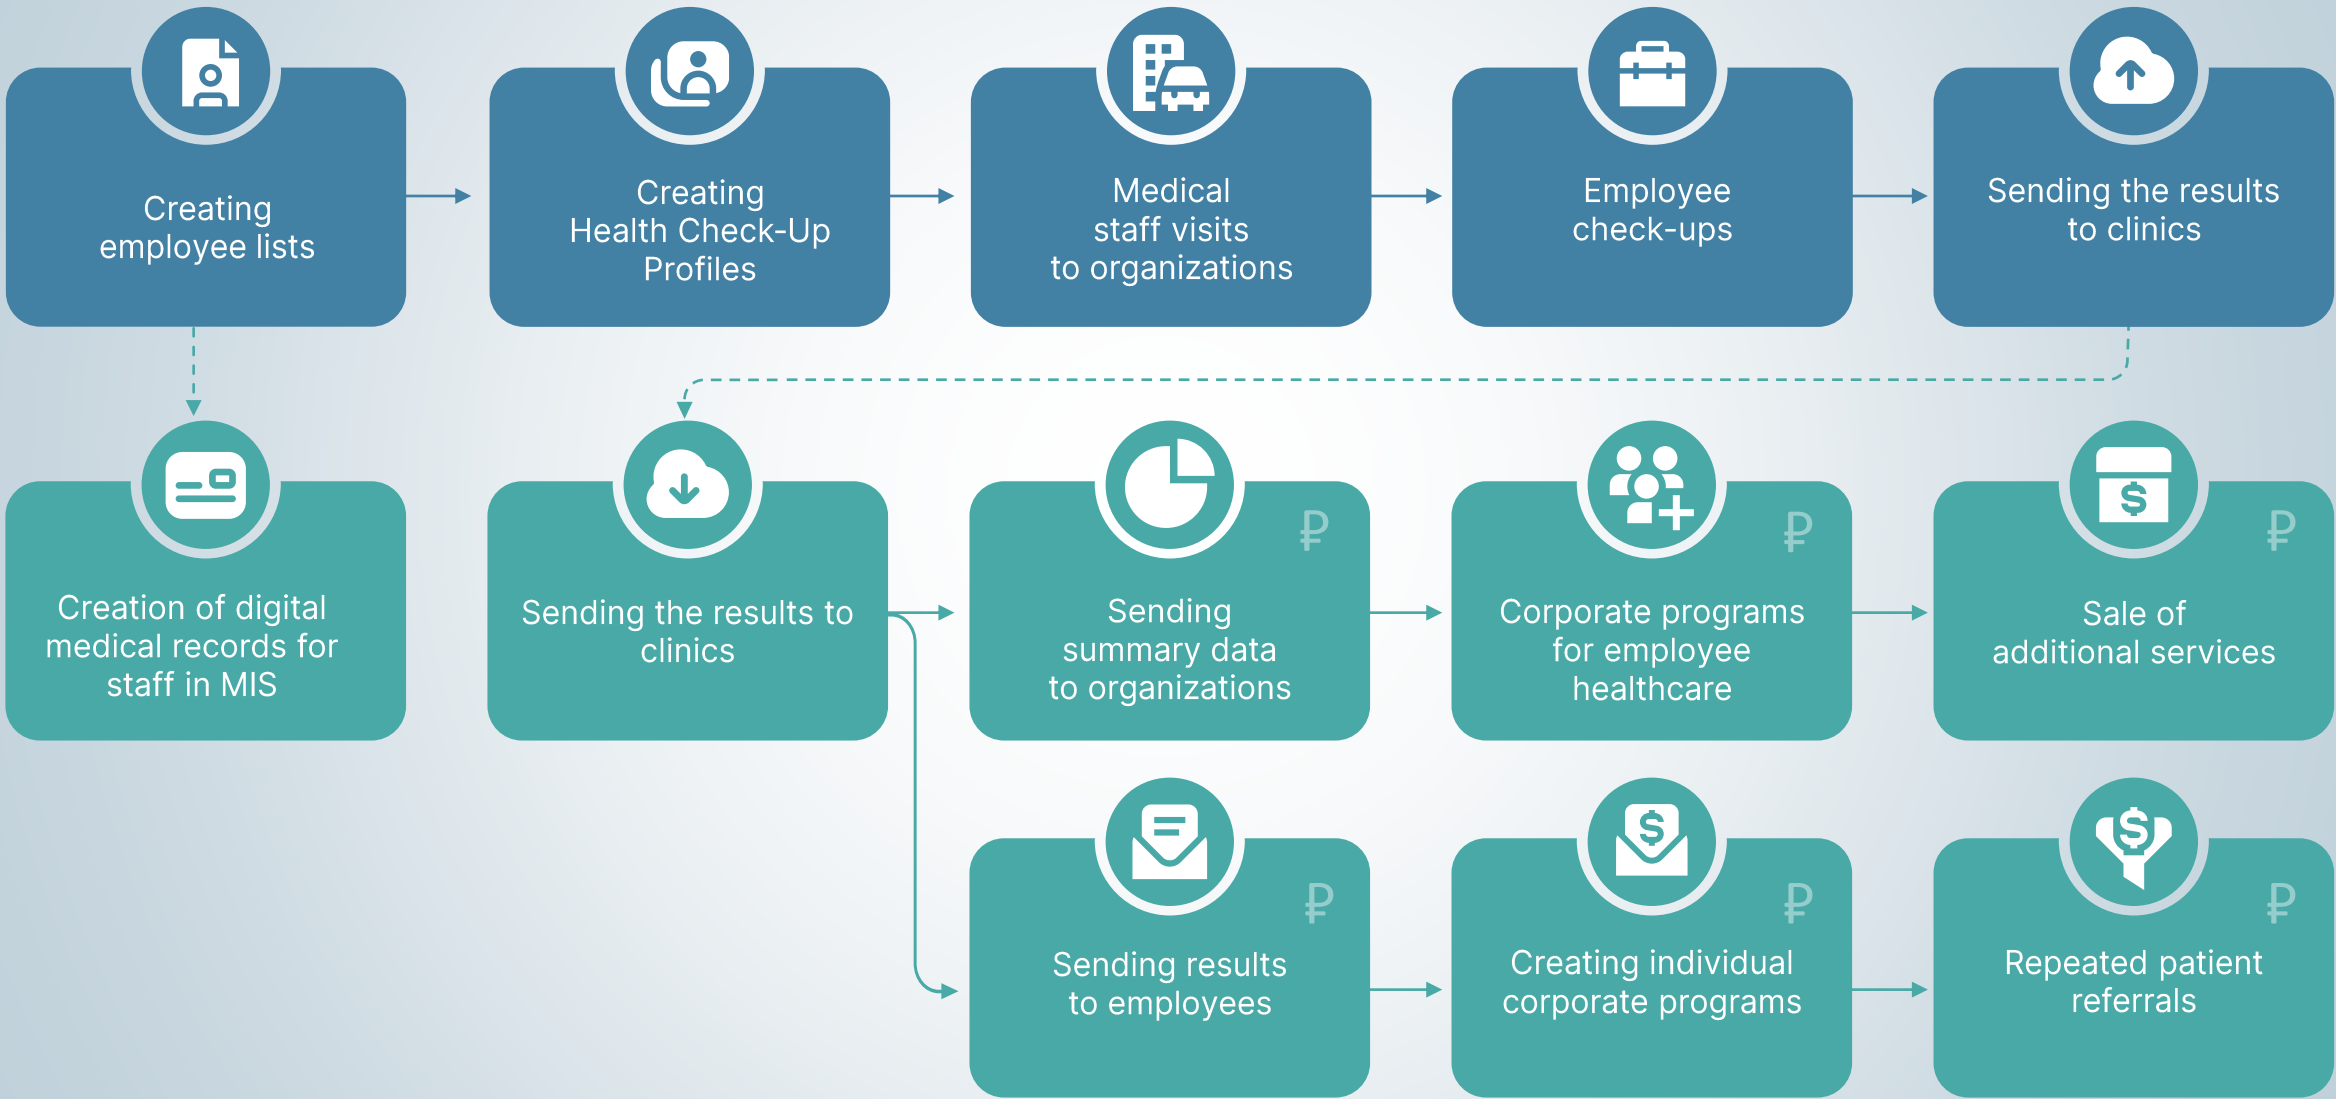

The number of people examined with deviations detected in the analyses by sex

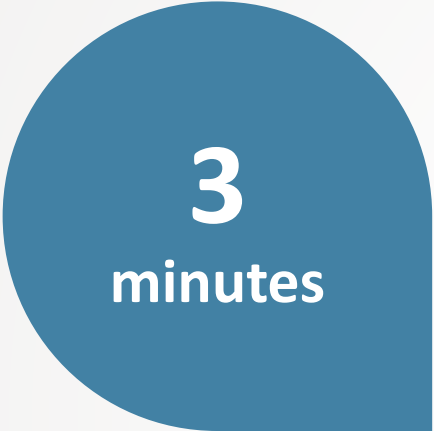

How it works

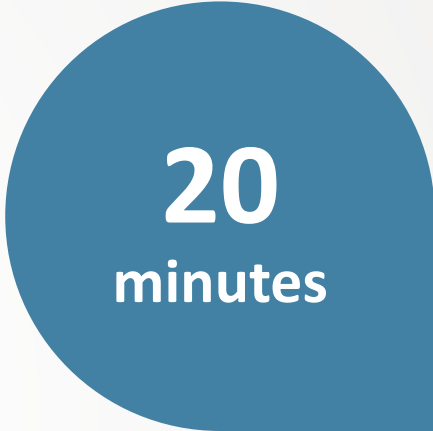

Key features

to start all
devices

on average,
per patient

per visit
of medical staff

- All devices fit into one convenient lightweight case
- No need to set up the equipment – just turn on the tablet
- Uploading reports by organization and by individual patient
- Check-up results can be transferred to MIS*
- Data collection software interface is simple and straightforward

* as a separate individual addition
